

Tribhuvan University
Faculty of Humanities and Social Science
Semester: IV
Subject: Scripting Language
2021 Batch

Group B

Attempt any SIX questions

2. Write JS program to highlight all of the words over eight characters long in the paragraph text (with a red background).
3. What is JavaScript? Explain different types of JavaScript with proper example.
4. Write PHP function that accepts username and password as arguments and check with student table, if credential match, redirect to dashboard page otherwise display 'Invalid username/password'.
5. What is jQuery? Explain XMLHttpRequest object with it's properties and methods with relevant example.
6. What is Widgets? Explain different Features of CMS.
7. Write rules to create variable in PHP. How to create, store, access and destroy session in PHP?
8. Write short note on (any two)
 - a) Types of array in PHP
 - b) Arrow Function in JavaScript
 - c) jQuery UI

Group C

Attempt any TWO questions.

9. Write server side script to create and validate form with following rule and store given data into 'patients' table with details (name, patient-id, mobile, gender, address, dob, doctor name)
 - Name, Mobile, doctor name, gender, dob: Required
 - Mobile: 10 digit start with 98,97 or 96
 - DOB: YYYY-MM-DD format
10. What is JavaScript Event? Explain different method that are available to access DOM element using id, class, name and selector with suitable example.
11. What is Inheritance? Explain different ways to implement polymorphism in PHP with proper example.

2020 Batch

Group B

Attempt any SIX questions

2. What is need for client side scripting? Write a JavaScript which accept user's first and last name and print them in reverse order with space between them.
3. Write a HTML code to design a form with three radio button green, red, blue and black. Write a JavaScript code that will change the background color of the page when user clicks on particular button.
4. What do you mean by super global variable in PHP? How to read and write CSV file in PHP explain with suitable example.
5. What is an associative array? Write a PHP program to create a multidimensional array that holds the marks of five subject like Operating system, Scripting, Numerical method, DBMS, Software Engineering and of three student Anshis, Jayanti, Niraj. Then display the average marks of each student.
6. What is use of inheritance? Write an object oriented PHP program to define Person class and derive student and employee class from it to demonstrate hierarchical inheritance.
7. What is syntax to create AJAX object? Design and develop dynamic web application using HTML, AJAX and PHP.
8. What is difference between WordPress theme and template? Write the steps to add and edit pages in WordPress.

Group C

Attempt any TWO questions.

9. What are different way to include JavaScript in HTML document? Create a HTML page containing a division with image and its description in paragraph. Write a JavaScript function to change the value of description in the paragraph during onmouseover and onmouseout on the image.
10. Design a HTML registration form containing text box for Name and Email, radio button for gender, selection list for education field. Write a PHP script to validate input and then store data from the form into database using database connection and appropriate query.
11. How jQuery is differing from JavaScript? Discuss different types of jQuery selectors with example.

2019 Batch

Group B

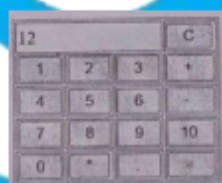

Attempt any SIX questions

2. Explain features of JavaScript?
3. What is NaN in JavaScript? Write JavaScript code to change background color of web page every second.
4. What is arrow function? Write JavaScript code to calculate factorial of given number using arrow function.
5. Write a program to create Chess board in PHP using loop.
6. Write jQuery code to include date picker controls in HTML text box.
7. Write a JavaScript program to retrieve any value from server-side script using Ajax.
8. What is constructor? How you implement constructor in php?

Group C

Attempt any TWO questions.

9. What are advantages of inheritance? Write a PHP program to illustrate the concept of function overloading.
10. Write HTML and JavaScript code to create a following calculator for performing basic arithmetic operations.

11. Design following form in HTML and write corresponding server-side script to upload and submit user's data into database in consideration of following validation rules.

Assume your own database and database connectivity related constrains if necessary.

Validation rules:

- Registration number, email and upload file are mandatory field.
- Email address should not be a proper email format.
- Upload file format must include pdf, doc, docx, ppt, pptx, jpeg file format.
- File size must be less than 5MB.

2018 Batch

Group B

Attempt any SIX questions

2. What is JavaScript? What are the potential platforms where JavaScript can be used?
3. Define JavaScript event. Illustrate how an event handler response particular event in web page.
4. What is an Immediately Invoked Function in JavaScript? Explain with suitable example.
5. Explain an array using suitable example and discuss how foreach loop accessing of elements is stored in an array using PHP.
6. What is jQuery? illustrate different types of selectors in jQuery with appropriate example?
7. What is the benefit of using AJAX? Discuss major methods that communicate with server-side scripting.
8. Discuss about MVC architecture with appropriate diagram.

Group C

Attempt any TWO questions.

9. a) Write a program which includes a function sum(). This function sum() should be designed to add an arbitrary list of parameters. (For e.g., if you call the function sum() as sum (1, 2) it should return the result 3 and if again you call the function sum() as sum(1,3,4) it should return the result 8).
b) Write a program that displays the continuous time in the web page. The time should be in the format of HH:MM:SS.
10. Define method overriding. Write a PHP program to handle the overriding situation.
11. Design following form in HTML and write corresponding PHP and SQL code for CRUD operations based on user's data.

Assume your own database and database connectivity related constrains if necessary.

2017 Batch

Group B

Attempt any SIX questions

2. Explain the concept structure and importance of DOM.
3. What is JavaScript? Write JavaScript code to print smallest and largest numbers among 10 elements of an array.
4. What is dialog box? Explain different dialog boxes with suitable example in JavaScript.
5. Explain the two HTTP functions to accept the user values from interface with suitable PHP program
6. What is the use of jQuery? Write the sample program to show and hide the certain div with the use of jQuery.
7. Why Ajax is required in web development? Write a sample program to synchronize data between JavaScript and PHP.
8. What is CMS, Write the steps to create submenu in WordPress or Joomla?

Group C

Attempt any TWO questions.

9. Design following form in HTML and display the value in the result box after calculating basic arithmetic operation based on the user input with the use of JavaScript.
10. Write an object-oriented PHP program to implement the concept of inheritance in considering with following class diagram with the use of constructor for 20 students.
11. Design following forms in HTML and write corresponding PHP and MySQL code to store the user's values after satisfying following validation rules.
 - a. Length of Full name up to 40 characters
 - b. Email address must be valid email address
 - c. Username must be start with string and followed by number.
 - d. Password length must be more than 8 characters.
