

Tribhuvan University
Faculty of Humanities and Social Science
Semester: IV
Subject: Software Engineering
2021 Batch

Group B

Attempt any SIX questions

2. Describe the challenges faced in software engineering.
3. Explain the principles and practices of Extreme Programming (XP) in software development and discuss its significance in modern software engineering methodologies.
4. What is regression testing? How test cases can be designed? Explain.
5. What is user interface design? Describe its main principles and the impact of a well-designed UI on user experience and software success.
6. Discuss the relationship between programming languages and development tools in software engineering, highlighting how they complement each other.
7. What is Capability Maturity Model (CMM)? Describe levels of CMM.
8. Explain the concept of versioning in software engineering and discuss its importance in software development and maintenance.

Group C

Attempt any TWO questions.

9. Discuss Computer-Aided Software Engineering (CASE) tools, their types, features, and the benefits they bring to the software development process. Provide examples of popular CASE tools and explain how they are used in various stages of the software development lifecycle.
10. Explain the processes of requirements validation and requirements specification in the context of software development. Highlight their significance, methods used, challenges encountered, and provide examples to illustrate their application.
11. Discuss the concept of modular decomposition in software engineering. Explain its importance, the principles guiding effective modular decomposition, and provide examples to illustrate how modular decomposition can be applied in practice.

2020 Batch

Group B

Attempt any SIX questions

2. What is software engineering? Explain the need of software life cycle models Engineering.
3. Why program is developed using evolutionary development are likely to be difficult to maintain? Explain.
4. What is meant by modular design? When and how should a modular design be implemented?
5. Write a detailed note on coding standards.
6. Why is SRS document also known as the black box specification of the system? Explain with example.
7. What do you mean by project management? Explain the project planning and project scheduling with example.
8. Explain COCOMO model for software cost estimation in detail.

Group C

Attempt any TWO questions.

9. What is configuration Management? What are the five levels of CMM? List important features of these levels.
10. Explain the software requirement analysis and specification. Discuss various methods for requirement gathering.
11. Write a detailed note on test case design techniques. Which method is best in integration testing? Top down or bottom up. Support your answer.

2019 Batch

Group B

Attempt any SIX questions

2. What is waterfall model? Describe the activities of waterfall model and also mention its drawbacks.
3. What is CASE? Explain the importance of CASE tools in software development life cycle.
4. Define modularization? Differentiate between cohesion and coupling with suitable example.
5. What are programming languages? Explain various software development tools.
6. Discuss COCOMO model in cost estimation of the software in detail.
7. What do you mean by verification and validation? Differentiate between Black Box testing and White Box testing.
8. Explain activities in software quality assurance with example.

Group C

Attempt any TWO questions.

9. Explain challenges faced by software engineering along with professional and ethical responsibility
10. What is Capability Maturity Model? Explain its levels along with key process area. Differentiate between alpha and beta testing.
11. What do you mean by software maintenance? Explain the different types of maintenance? Explain reengineering process in detail.

2018 Batch

Group B

Attempt any SIX questions

2. What is software engineering? Explain the challenges facing software engineering.
3. What is extreme programming? Explain how the principles underlying extreme programming lead to the accelerated development of software.
4. Define quality assurance? Under what circumstances would you recommend the use of staged representation of the CMM?
5. What is architectural design? Explain layered model of software architecture with example.
6. Differentiate between verification and validation. Explain why software inspection is an effective technique for discovering errors in software?
7. What is software reengineering? List its advantages. Explain source code translation and reverse engineering approach in brief.
8. What do you mean by software quality management? Explain software quality management activities in brief.

Group C

Attempt any TWO questions.

9. What is software process model? List different software process model. Explain how both the waterfall model of the software process and prototyping model can be accommodated in the spiral process model.
10. What do you mean by software requirement? Differentiate between functional requirement and non-functional requirement. List the functional requirements of online examination system and represent it in use case diagram.
11. a) What is risk management? Explain risk management process in software engineering with block diagram.
b) List good programming practices. Explain CASE and its type with example.

Group B

Attempt any SIX questions

2. What are the attributes of good software? What are the key challenges that software engineering face during software development? Explain.
3. What is software process model? List the types of software model. Explain agile methods and Software prototyping.
4. What are the types of software requirements? Explain functional, non-functional, domain and user requirements.
5. Define software design concept and modularization? Differentiate cohesion and coupling."
6. Why User Interface design is so important? How UI design visualized? Discuss.
7. Why software maintenance is considered as major component in SDLC? Explain software maintenance types.
8. What do you mean by configuration management? Why it is important? Explain.

Group C

Attempt any TWO questions.

9. What are the skills necessary to handle software project? Explain different software projects management activities.
10. What are ISO quality standards? Discuss ISO9000 and ISO9001. Explain Black box testing and white box testing techniques.
11. What are the techniques that are used to elicit and analysis of requirements during software requirements analysis and specification? Explain all.
